

## UI/UX Front-end Developer Coding Exercise

You have been assigned to develop the below mockup for the UI/UX team. As a front-end developer, you'll be complementing our back-end dev teams by providing the HTML, CSS, and front-end JS code for necessary API calls to the database. You'll be developing the landing page dashboard to kick off the project. Please read the requirements below to get started.

### HTML, CSS, + JS Components Used

- Toaster Alert
- Dropdown
- Table
- List (with list hover (indicated in design))
- Google Map embed (<https://www.google.com/maps/@20.8846913,-156.4647848,15.48z>)
- Left Side Menu
- Drop Shadows
- Gradient
- Inputs
- Buttons

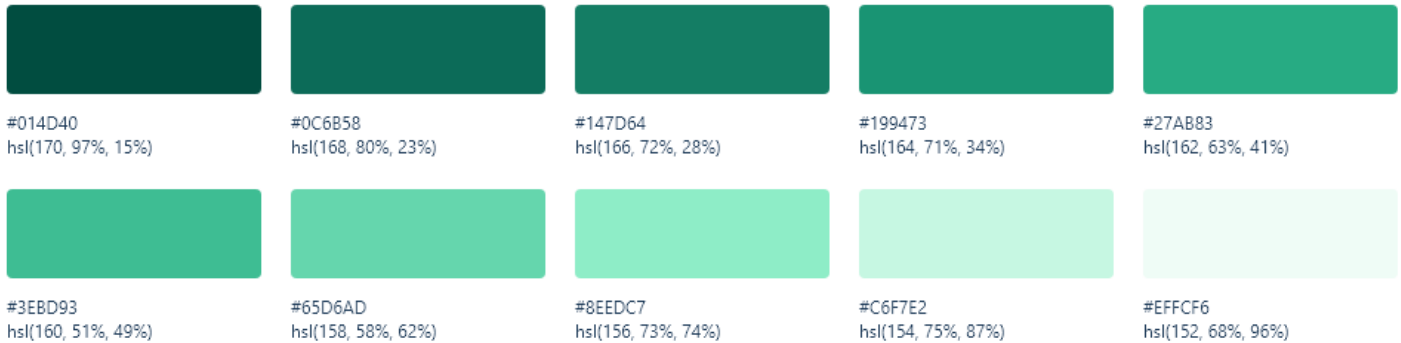

### Requirements

- Build out the above design (larger mockup on the following page)
- Use Angular CLI as the front-end JS framework (Not Angular JS)
- Use a CSS Framework of your choosing (Bootstrap, Semantic, Foundation, Material, or TailwindCSS)
- Use a JSON file to populate tables and lists
- Use provided color palette on the next page
- Use of Icon set (whatever you like to work with)
- Upload this to a version control platform (Github, BitBucket, etc.) and invite or share a public link to, Ben Schulke ([ben.schulke@crowe.com](mailto:ben.schulke@crowe.com)) and Anthony Gratson ([anthony.gratson@crowe.com](mailto:anthony.gratson@crowe.com)).

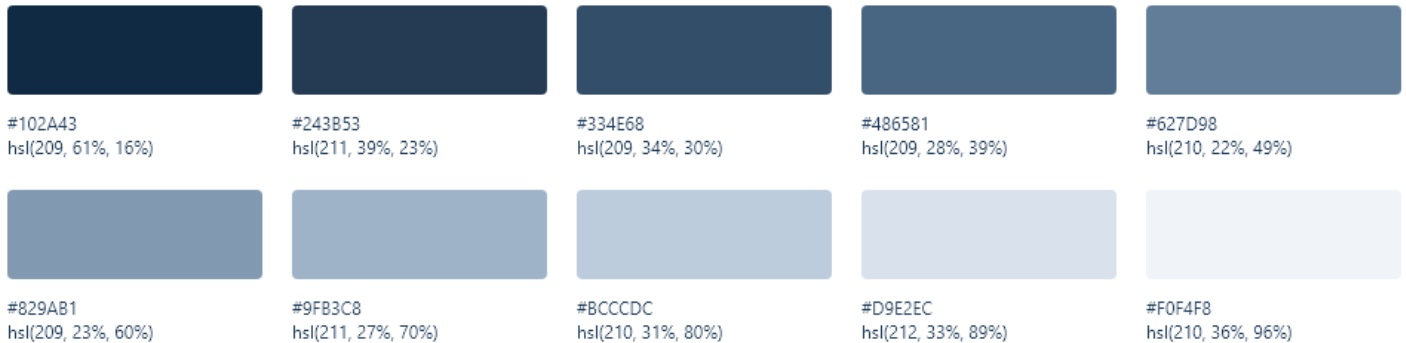

**Bonus** (really, this is a bonus, so don't sweat it if you don't get to it):

- Add any creative elements to polish the design (i.e., enhancements to the design, animations, etc.)
